

Atlas 32: Moser, H. G., R. L. Charter, P. E. Smith, D. A. Ambrose, S. R. Charter, C. A. Meyer, E. M. Sandknop, and W. Watson. Distributional atlas of fish larvae in the California Current region: taxa with less than 1000 total larvae, 1951-1984. Published October 1994.

23 May 2007

References to the data, published in annual ichthyoplankton data reports are given in the introduction to the Atlas. In addition, these data are available in PDF format on the SWFSC web site at <http://swfsc.noaa.gov/publications/swcpub/qryPublications.asp>, enter "ichthyoplankton" in the Subject line and "California Cooperative Oceanic Fisheries Investigations" in the Title line. Checking the ALL YEARS button will produce the entire list of available data.

The report for each year usually is published about 7-9 months after the fall cruise, and includes notes about nomenclature changes, etc. The ultimate goal is to update the old ichthyoplankton identifications to current standards; the database is updated as re-identifications for each cruise are completed.

THE CALCOFI ATLAS SERIES

This is the thirty-second in a series of atlases containing data on the hydrography and plankton from the region of the California Current. The field work was carried out by the California Cooperative Oceanic Fisheries Investigations,¹ a program sponsored by the following agencies:

California Department of Fish and Game

National Oceanic and Atmospheric Administration, National Marine Fisheries Service²

University of California, Scripps Institution of Oceanography

CalCOFI atlases³ are issued as individual units as they become available. They provide processed physical, chemical and biological measurements of the California Current region. Each number may contain one or more contributions. A general description of the CalCOFI program with its objectives appears in the preface of Atlas No. 2.

CalCOFI Atlas Editorial Board:

Doyle Hanan

Michael M. Mullin

Michael Tillman

CalCOFI Coordinator:

George T. Hemingway

CalCOFI atlases in this series, through October 1994 are:

- No. 1. Anonymous, 1963. CalCOFI atlas of 10-meter temperatures and salinities 1949 through 1959.
- No. 2. Fleminger, A., 1964. Distributional atlas of calanoid copepods in the California Current region, Part I.
- No. 3. Alvariño, A., 1965. Distributional atlas of Chaetognatha in the California Current region.
- No. 4. Wyllie, J.G., 1966. Geostrophic flow of the California Current at the surface and at 200 meters.
- No. 5. Brinton, E., 1967. Distributional atlas of Euphausiacea (Crustacea) in the California Current region, Part I.
- No. 6. McGowan, J.A., 1967. Distributional atlas of pelagic molluscs in the California Current region.
- No. 7. Fleminger, A., 1967. Distributional atlas of calanoid copepods in the California Current region, Part II.
- No. 8. Berner, L.D., 1967. Distributional atlas of Thaliacea in the California Current region.
- No. 9. Kramer, D. and E.H. Ahlstrom, 1968. Distributional atlas of fish larvae in the California Current region: northern anchovy, *Engraulis mordax* Girard, 1951 through 1965.
- No. 10. Isaacs, J.D., A. Fleminger and J.K. Miller, 1969. Distributional atlas of zooplankton biomass in the California Current region: Spring and Fall 1955 -1959.
- No. 11. Ahlstrom, E.H., 1969. Distributional atlas of fish larvae in the California Current region: jack mackerel, *Trachurus symmetricus*, and Pacific hake, *Merluccius productus*, 1951 through 1966.
- No. 12. Kramer, D., 1970. Distributional atlas of fish eggs and larvae in the California Current region: Pacific sardine, *Sardinops caerulea* (Girard), 1951 through 1966.
- No. 13. Smith, P.E., 1971. Distributional atlas of zooplankton volume in the California Current region, 1951 through 1966.
- No. 14. Isaacs, J.D., A. Fleminger and J.K. Miller, 1971. Distributional atlas of zooplankton biomass in the California Current region: Winter, 1955-1959.

¹ Usually abbreviated CalCOFI, sometimes CALCOFI or CCOFI.

Introduction

This atlas summarizes the spatial and temporal distributions of 122 larval fish taxa with < 1000 total larvae (summed counts per 10 m²) collected on California Cooperative Oceanic Fisheries Investigations (CalCOFI) plankton survey cruises from 1951 through 1984. Atlas 31 summarized the distributions of 110 taxa with ≥ 1000 total larvae and presented background and interpretive information on the CalCOFI survey station pattern, cruise coverage, sampling and processing methods, and the CalCOFI ichthyoplankton data base (Moser et al., 1993). The two atlases provide basic information on the distribution and abundance of all taxa

represented in the current CalCOFI ichthyoplankton data base and serve as guides to users of the data base.

The CalCOFI surveys from 1951 through 1984 in the California Current region produced 31,214 plankton tows yielding ca. 12 million fish larvae distributed in 245 identified taxa. Larvae were identified to species or were assigned to the lowest taxon possible (genus, family, suborder, order). Data presented in this atlas represent either original identifications or new identifications resulting from reexamination of data and archived samples. Atlas 31 contained a table of ranked abundance (number per 10 m² of sea surface) of all taxa included in the 1951-1984 time series and a table of ranked occurrences for all taxa. Correction of tow data and reexamination of some taxa during the preparation of this atlas resulted in minor modification of the data base; revised tables of ranked abundance (Table 1) and ranked occurrence (Table 2) in this atlas reflect these changes. Five higher taxa (Stomiiformes, Myctophiformes, Scorpaenidae, Scombridae, Bothidae) with < 1000 total larvae consisted primarily of small damaged specimens that could not be identified further. They were not analyzed, but their distributions are represented in analyses of component taxa.

Distributions for those taxa adequately represented in the data base are summarized in a series of charts and graphs arranged on two

¹Southwest Fisheries Science Center, National Marine Fisheries Service, La Jolla, California

facing pages per taxon. The upper panel on the left page is a map of total abundance expressed as the logarithm of summed abundance (larvae per 10 m²) for all occurrences in the time series (station pattern shown in Figure 1). Distributions of some nearshore taxa are shown on enlarged maps because the abundance markers were obscured by the coastline on maps of the entire CalCOFI pattern; base maps of these enlarged regions of the survey pattern are shown in Figures 2 to 4. The lower panel is a series of four quarterly maps that show mean abundance (expressed as larvae per 10 m²) in each of 22 CalCOFI regions (Figure 5). Region 24 has an indeterminate area and in this data base is represented by the stations indicated in Figure 5. On the quarterly charts, Region 24 is shown as the area enclosed in the dashed line seaward of Regions 6 and 10. The number of station occupancies in each region for each quarter varied considerably, with marked diminution of effort in peripheral regions (Moser et al., 1993). Regions 3 and 23 were insufficiently sampled to be included in the maps of quarterly mean abundance. On these charts, regions within which no larvae of a subject taxon were captured during a quarter are indicated by a "0", and the region with the highest quarterly mean abundance is marked with a star.

Graphs summarizing interannual, seasonal and onshore-offshore occurrence and abundance of taxa with adequate representation are presented on the right-hand page of each taxon description. Calculations of seasonal and interannual mean occurrence and abundance were based on a pool of CalCOFI regions that fell within the principal distribution of the taxon of interest. This was determined by examination of all records in the time series for that taxon. Table 3 lists the pooled regions for all taxa analyzed in this atlas and in Atlas 31. The top-left graph gives annual mean occurrence (percent positive tows) for the selected regional pool. The top-right graph presents mean annual abundance as the number of larvae per 10 m² of surface area for all (including zeros) stations occupied in the regional pool for each year. Mean occurrence

and abundance for CalCOFI surveys in 1967 and 1968 were not included because of inadequate seasonal and areal coverage (see Table 1 in Moser et al. 1993). Missing data points on the interannual plots correspond to years when a taxon was not on the list of identifiable taxa. Also, values were not plotted for years when a taxon's selected regional pool was not sampled on CalCOFI surveys; this applies principally to 1984, when no sampling occurred south of CalCOFI line 110. The middle-left graph gives monthly mean occurrence (percent positive tows) for the regional pool and the middle-right graph gives monthly mean abundance (number per 10 m² for all stations occupied). Onshore-offshore occurrence and abundance are shown in the bottom-left and bottom-right graphs, respectively. For these calculations the data base was partitioned into seven alongshore zones (Figure 6): Northern California (N CAL), Central California (C CAL), Southern California (S CAL), Northern Baja California (N BAJA CAL), North-central Baja California (NC BAJA CAL), South-central Baja California (SC BAJA CAL), and Southern Baja California (S BAJA CAL). Stations in these zones were further segregated into 14 bins based on distance from the coast (Moser et al. 1993). For each taxon one or more zones were selected from the core of their north-south range and mean occurrence (percent positive tows) and mean abundance (number per 10 m² of surface area for all stations) were calculated for each bin. These values are plotted in the graphs. Note that the labels on the x-axis refer to the offshore limit of each bin; for example, "5 n. mi." refers to the 0-5 n. mi. bin and "10 n. mi." refers to the 5-10 n. mi. bin. Values were not plotted for onshore-offshore bins represented by less than nine tows.

Distribution summaries of taxa with very low abundance are presented in briefer formats. Beginning with Eutaeniophoridae (summed abundance of 38 larvae) only distributional maps and quarterly regional charts are presented since data were not adequate to produce graphs of mean occurrence and abundance. Taxa represented by 10 or fewer larvae do not have

quarterly regional charts: beginning with *Anopterus pharao* (10 total larvae) only distributional maps are presented, with three taxa to a page.

Scientific names used in this atlas generally conform to those used in identification guides of the region (Miller and Lea, 1972; Eschmeyer et al., 1983; Matarese et al., 1989) and ordinal and family nomenclature follow Eschmeyer's (1990) classification. The taxa included in higher systematic categories (genera, families, and orders) changed during the course of the survey period because of refinements in our ability to identify larvae. These changes are documented in the series of CalCOFI ichthyoplankton data reports (see Moser et al., 1993) and, with other interpretive notes, are listed briefly below:

Albula spp.-- larvae probably represent a single species; however, the taxonomy of eastern Pacific albulids has not been resolved

Engraulidae-- includes nearshore taxa (mostly *Anchoa* spp.) large enough to distinguish from *Engraulis mordax*

Alepocephalidae-- these records represent probable misidentifications; however, this could not be confirmed because the specimens are missing

Bathophilus spp.-- larvae north of Punta Eugenia, Baja California are *B. flemingi*; larvae off southern Baja California are *B. filifer*

Tactostoma macropus-- see Kawaguchi and Moser (1993) for detailed discussion of distribution and abundance of this species in the north Pacific

Evermannellidae-- larvae examined to date are *Evermannella* spp.; most are too small to identify to species

Aulopus spp.-- larvae represent one or more undescribed species

Notolepis risso-- identification of paralepidid taxa began in 1961; prior identifications were to family; other paralepidids in this atlas are *Stemonosudis macrura*, *Sudis atrox*, and *Paralepis atlantica*

Scopelarchus spp.-- identification of scopelarchid taxa began in 1972; prior identifications were to family; other scopelarchids in this atlas are *Benthalbella dentata*, *Rosenblattichthys volucris*, and *Scopelarchoides nicholsi*

Myctophiformes-- includes unidentifiable damaged myctophiform and aulopiform larvae

Moridae-- almost all larvae from southern Baja California are *Microlepidium verecundum*

Physiculus spp.-- most larvae captured in the Pacific are *P. rastrelliger* and most taken in the Gulf of California are *P. nematopus*

Carapidae-- all specimens reexamined to date are *Echiodon exsiliun*

Antennariidae-- all specimens reexamined to date from the regular CalCOFI pattern are *Antennarius avalonis*

Eutaeniophoridae-- all specimens reexamined to date are *Eutaeniophorus festivus*

Fistulariidae-- all specimens reexamined to date are *Fistularia commersoni*

Syngnathus spp. --contains *Cosmocampus arctus* in addition to 2 or 3 *Syngnathus* species; the majority of specimens are *Syngnathus*

Hexagrammidae-- contains mostly *Hexagrammus* spp.

Sebastidae-- beginning in 1972, this and four other *Sebastodes* (*S. aurora*, *S. jordani*, *S. macdonaldi*, *S. paucispinis*) were identified; prior to 1972, records of *S. levis* are included in *Sebastes* spp.

Blennioidei-- contains so-called "northern blennioids" and "tropical blennioids", primarily bathymasterids, stichaeids, pholids, clinids, and labrisomids that could not be identified to family (usually because of damaged condition)

Semicossyphus pulcher-- identification of labrid taxa began in 1961; prior identifications were to family

Priacanthidae-- four species occur in the CalCOFI area; the larva shown on page 176 is *Pristigenys serrula*; after the maps were completed, another specimen, possibly *Heteropriacanthus cruentatus*, was identified at station 130.50 from CalCOFI survey 7207

Cheilotrema saturnum-- identification of sciaenid taxa began in 1981; prior identifications were to family; other sciaenids in this atlas are *Atractoscion nobilis* and *Roncador stearnsii*

Sparidae-- all specimens reexamined to date are *Calamus brachysomus*

Gempylidae-- most specimens examined to date are *Gempylus serpens* and *Diplospinus multistriatus*

Euthynnus spp.-- all larvae examined in CalCOFI collections are *E. lineatus*

Scomberomorus spp.-- all larvae probably are *S. sierra*

Thunnus albacares-- larvae of *Thunnus obesus* and *T. albacares* may be indistinguishable

Nomeidae-- identification of nomeid taxa began in 1972; prior identifications were to family; in this atlas the Nomeidae category includes records of all taxa prior to 1972; other nomeid taxa in this atlas are *Cubiceps caeruleus*, *C. pauciradiatus*, *Psenes pellucidus*, and *P. sio*

Bathymasteridae-- most are *Rathbunella* spp.; these were not recognized until recently and

previously were identified as Clinidae or occasionally as Blennioidei; larval *Rathbunella* were collected primarily at inshore stations off southern California in winter and spring

Bothus spp.-- all specimens reexamined to date appear to be one species; the correct name for the common *Bothus* species in the eastern tropical Pacific is *B. leopardinus* (R. Lavenberg, pers. comm.)

Citharichthys platophrys-- during the preparation of the data base, all *Citharichthys* larvae from surveys in 1954-1960 and 1984 were reexamined and identified to species; records of *C. platophrys* in this atlas represent only those years

Etropus spp.-- larvae of *Etropus* are similar to those of *Citharichthys* and were not separated from them by the original identifiers; during the preparation of the data base all *Citharichthys* larvae (including *Etropus* spp.) from surveys in 1954-1960 and 1984 were reexamined and reidentified; records of *Etropus* spp. in this atlas represent only those years

Atlas 31 and 32 represent a stage in the development of the CalCOFI ichthyoplankton data base indicative of identification competence over the first three decades of the program. During the past several years the Systematics and Ecology of Fishes group at the Southwest Fisheries Science Center has been preparing an identification guide to the early life history stages of fish taxa collected on CalCOFI surveys from 1951 to the present. This has greatly improved our ability to identify CalCOFI fish eggs and larvae and these advances will be applied in the future when we identify cruises conducted since 1984 and as we examine historical samples to refine identifications within large taxonomic categories.

Acknowledgements

We are indebted to the scientists, technicians, and ships' crews associated with the CalCOFI surveys. Elbert H. Ahlstrom initiated a comprehensive approach to the identification of CalCOFI fish eggs and larvae, without which there would be no ichthyoplankton time series. Barbara Sumida MacCall and Elizabeth G. Stevens made valuable contributions during the development of the data base. Roy M. Allen was responsible for drafting most of the charts and graphs. Amy E. Hays assisted with computer programming.

<i>Scopeloberyx robustus</i>	100
<i>Sebastes levis</i>	14
<i>Semicossyphus pulcher</i>	24
<i>Seriola</i> spp.	169
<i>Sparidae</i>	88
<i>Stemonosudis macrura</i>	110
<i>Sudis atrox</i>	130
<i>Syacium ovale</i>	78
<i>Syngnathus</i> spp.	50
<i>Taaningichthys minimus</i>	169
<i>Tactostoma macropus</i>	10
<i>Tetraodontidae</i>	161
<i>Thunnus albacares</i>	138
<i>Triphoturus nigrescens</i>	145
<i>Valenciennellus tripunctulatus</i>	143
<i>Vinciguerria poweriae</i>	44
<i>Woodsia nonsuchae</i>	175
<i>Zaniolepis</i> spp.	2

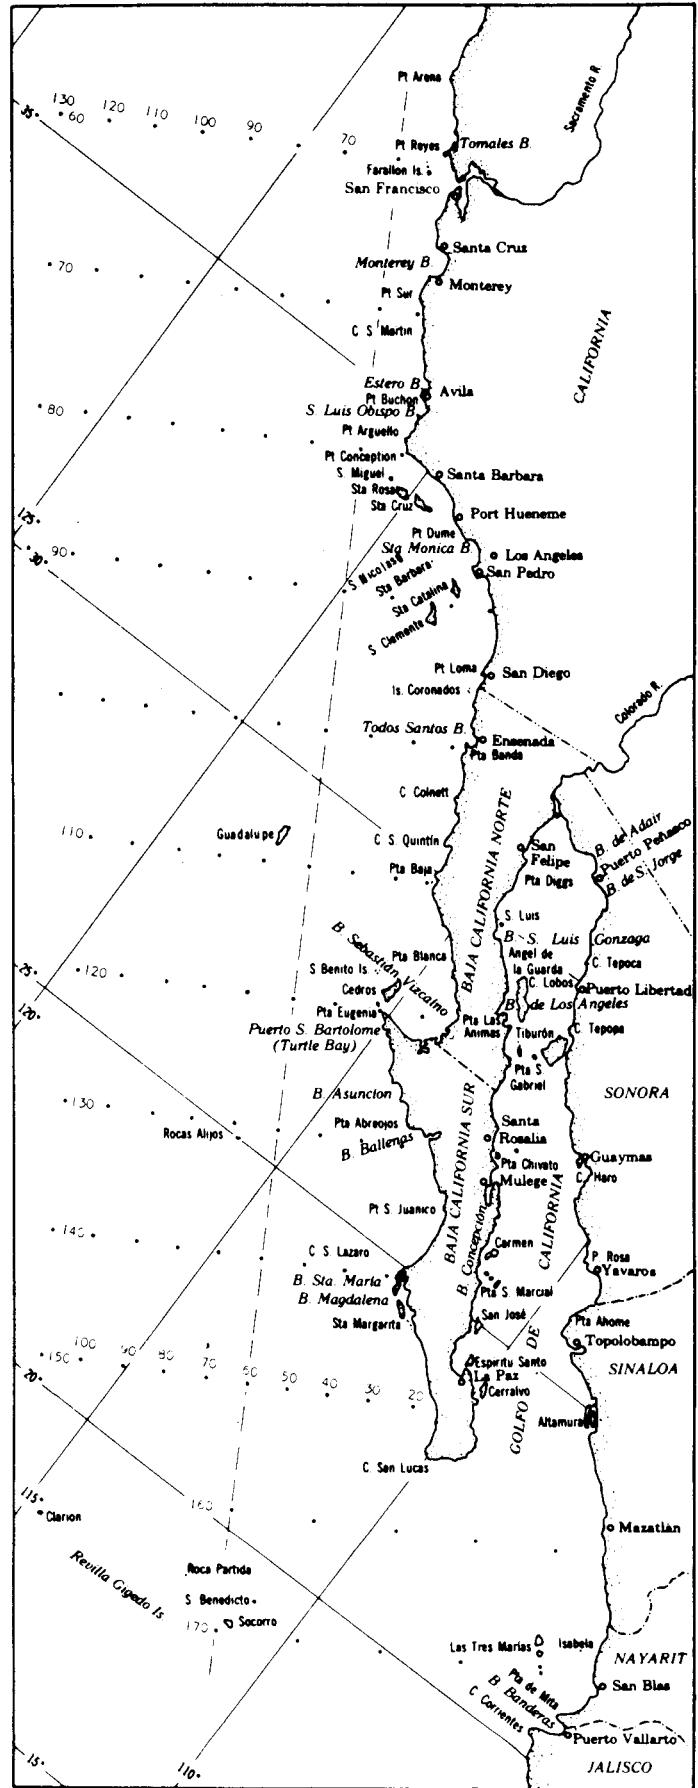

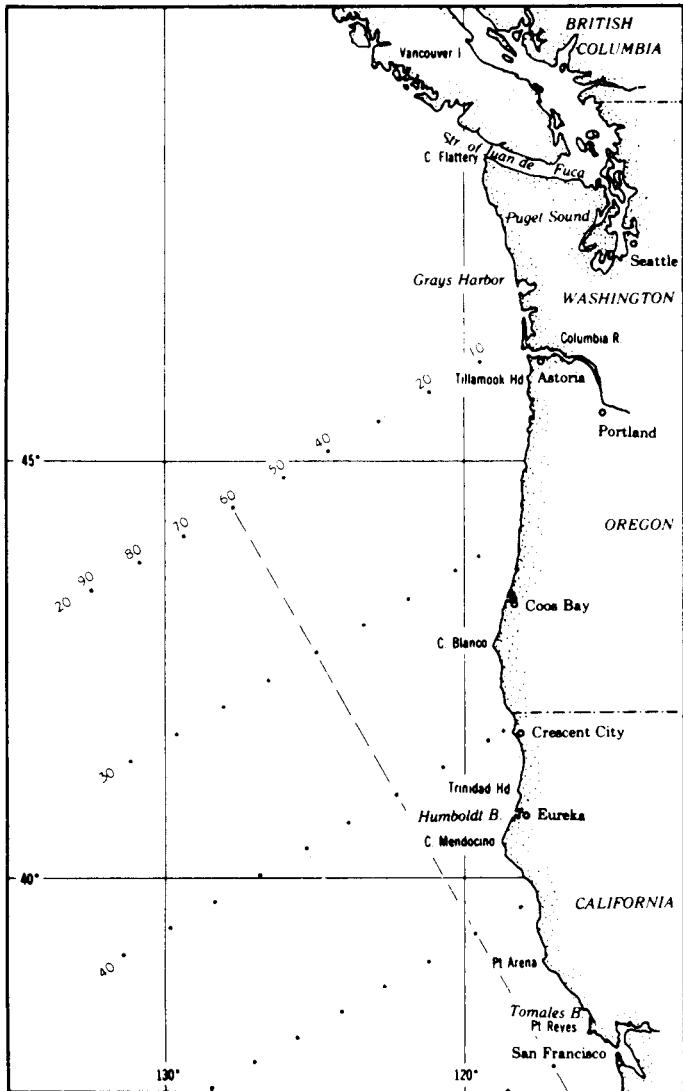

PHYLOGENETIC INDEX

(Taxa listed alphabetically within orders)

	Page		Page
Albuliformes		Aulopoidei	
Albulidae		Aulopidae	
<i>Albula</i> spp.	140	<i>Aulopus</i> spp.	134
Clupeiformes		Scopelarchidae	
Engraulidae	150	<i>Benthalbella dentata</i>	94
Salmoniformes		<i>Rosenblattichthys volucris</i>	58
Argentinoidei		<i>Scopelarchoides nicholsi</i>	116
<i>Alepocephalidae</i>	171	<i>Scopelarchus</i> spp.	30
Bathylagidae		Myctophiformes	
<i>Bathylagus longirostris</i>	148	Myctophidae (Lampanyctinae)	
<i>Bathylagus milleri</i>	18	<i>Bolinichthys</i> spp.	126
<i>Leuroglossus schmidti</i>	156	<i>Parvilux ingens</i>	162
Opisthoproctidae		<i>Taaningichthys minimus</i>	169
<i>Bathylychnops exilis</i>	174	<i>Triphoturus nigrescens</i>	145
<i>Dolichopteryx longipes</i>	170	Myctophidae (Myctophinae)	
<i>Macropinna microstoma</i>	159	<i>Benthosema pterota</i>	96
Salmonoidei		<i>Centrobranchus nigrocellatus</i>	112
Osmeridae	20	<i>Electrona risso</i>	38
Stomiiformes		<i>Hygophum proximum</i>	172
Astronesthidae	165	<i>Loweina rara</i>	12
Gonostomatidae		<i>Myctophum aurolateratum</i>	28
<i>Gonostoma</i> spp.	167	<i>Protomyctophum thompsoni</i>	92
Malacosteidae		Gadiformes	
<i>Aristostomias scintillans</i>	8	Gadidae	
Melanostomiidae		<i>Gadus macrocephalus</i>	173
<i>Bathophilus</i> spp.	52	<i>Microgadus proximus</i>	118
<i>Eustomias</i> spp.	151	Macrouridae	54
<i>Photonectes</i> spp.	98	Moridae	72
<i>Tactostoma macropus</i>	10	<i>Physiculus</i> spp.	114
Phosichthyidae		Ophidiiformes	
<i>Vinciguerria poweriae</i>	44	Carapidae	132
<i>Woodsia nonsuchae</i>	175	Batrachoidiformes	
Sternopychidae		Batrachoididae	
<i>Valenciennellus tripunctulatus</i>	143	<i>Porichthys</i> spp.	147
Aulopiformes		Lophiiformes	
Alepisauroidei		Antennarioidei	
Anotopteridae		<i>Antennariidae</i>	170
<i>Anotopterus pharao</i>	168	Lophioidei	
Evermannellidae	120	<i>Lophiididae</i>	171
Paralepididae		Atheriniformes	
<i>Notolepis risso</i>	36		
<i>Paralepis atlantica</i>	175		

	Page		Page
Atherinidae	22	<i>Hypsipops rubicundus</i>	4
Beloniformes		Scaridae	166
Exocoetidae	68	Mugiloidei	
Hemiramphidae	163	Mugilidae	
<i>Oxyporhamphus micropterus</i>	152	<i>Mugil</i> spp.	102
Lampriformes		Percoidei	
Miripinnatoidei		Apogonidae	144
Eutaeniophoridae	142	Bramidae	
Beryciformes		<i>Brama</i> spp.	32
Melamphaidae		Carangidae	
<i>Scopeloberyx robustus</i>	100	<i>Seriola</i> spp.	169
Syngnathiformes		Caristiidae	
Aulostomoidei		<i>Caristius macropus</i>	153
Centriscidae		Coryphaenidae	
<i>Macroramphosus gracilis</i>	64	<i>Coryphaena hippurus</i>	60
Fistulariidae	174	Ephippidae	
Syngnathoidei		<i>Chaetodipterus zonatus</i>	173
Syngnathidae		Kyphosidae	
<i>Syngnathus</i> spp.	50	<i>Girella nigricans</i>	76
Scorpaeniformes		<i>Medialuna californiensis</i>	16
Anoplopomatoidei		Malacanthidae	
Anoplopomatidae		<i>Caulolatilus princeps</i>	40
<i>Anoplopoma fimbria</i>	155	<i>Mullidae</i>	108
Cottoidei		<i>Opistognathidae</i>	176
Cyclopteridae	6	<i>Priacanthidae</i>	176
Hexagrammoidei		<i>Sciaenidae</i>	
Hexagrammidae	84	<i>Atractoscion nobilis</i>	168
<i>Ophiodon elongatus</i>	136	<i>Cheilotrema saturnum</i>	160
<i>Oxylebius pictus</i>	48	<i>Roncador stearnsii</i>	168
<i>Zaniolepis</i> spp.	2	Sparidae	88
Scorpaenoidei		<i>Incertae sedis</i>	
Scorpaenidae		<i>Howella brodiei</i>	82
<i>Sebastes levis</i>	14	Polynemoidei	
Perciformes		<i>Polynemidae</i>	146
Acanthuroidei		Scombroidei	
Acanthuridae	175	<i>Gempylidae</i>	62
Blennioidei	<i>Scombridae</i>	
<i>Microdesmidae</i>	154	<i>Euthynnus</i> spp.	164
Icosteoidei		<i>Scomberomorus</i> spp.	74
Icosteidae		<i>Thunnus albacares</i>	138
<i>Icosteus aenigmaticus</i>	86	Trichiuridae	
Labroidei		<i>Trichiurus fitchi</i>	34
Labridae		Stromateiodei	
<i>Semicossyphus pulcher</i>	24	<i>Nomeidae</i>	90
Pomacentridae		<i>Cubiceps caeruleus</i>	172
		<i>Cubiceps pauciradiatus</i>	122

	Page
<i>Psenes pellucidus</i>	124
<i>Psenes sio</i>	149
Zoarcoidei	
Bathymasteridae	157
Pleuronectiformes	
Pleuronectoidei	
Bothidae	
<i>Bothus</i> spp.	104
Paralichthyidae	
<i>Citharichthys platophrys</i>	174
<i>Cyclopsetta</i> spp.	173
<i>Etropus</i> spp.	56
<i>Hippoglossina</i> spp.	158
<i>Paralichthys</i> spp.	170
<i>Syacium ovale</i>	78
Pleuronectidae	
<i>Eopsetta jordani</i>	169
<i>Hypsopsetta guttulata</i>	80
<i>Isopsetta isolepis</i>	128
<i>Lepidopsetta bilineata</i>	106
<i>Platichthys stellatus</i>	70
<i>Pleuronichthys coenosus</i>	26
<i>Pleuronichthys decurrens</i>	66
<i>Psettichthys melanostictus</i>	42
Soleoidei	
Achiridae	
<i>Achirus mazatlanus</i>	176
Tetraodontiformes	
Balistoidei	
Balistidae	171
Tetraodontoidei	
Tetraodontidae	161

These maps are designed to show essential details of the area most intensively studied by the California Cooperative Oceanic Fisheries Investigations. This is approximately the same area as is shown in color on the front cover. Geographical place names are those most commonly used in the various publications emerging from the research. The cardinal station lines extending southwestward from the coast are shown. They are 120 miles apart. Additional lines are utilized as needed and can be as closely spaced as 12 miles apart and still have individual numbers. The stations along the lines are numbered with respect to the station 60 line, the numbers increasing to the west and decreasing to the east. Most of them are 40 miles apart, and are numbered in groups of 10. This permits adding stations as close as 4 miles apart as needed. An example of the usual identification is 120.65. This station is on line 120, 20 nautical miles southwest of station 60.

The projection of the front cover is Lambert's Azimuthal Equal Area Projection. The detail maps are a Mercator projection.
